Thorium Energy Alliance - 2022 Progress

This past year, as we have returned to a more normal existence, was productive and inspiring as we forged ahead in our mission to utilize the many benefits of Thorium. Obviously, it was such a pleasure to reinstitute the TEAC conference with a resounding success last month in New Mexico. Thank you to all of you who attended and live streamed the event, and especially the tremendous efforts made by the presenters. In conjunction with the conference, we were finally able to create the long anticipated [Thorium Museum Exhibit](#), unveiling it as we concluded TEAC 11. The reality of completing this first installation is a testament to the people who made this happen.

Other exciting projects that have progressed throughout 2022 are: The Thorium Mill, industry outreach for Thorium applications, Thorium Policy in conjunction with Critical Minerals, and the 2nd Edition of the MSR textbook. Additionally, the Thorium Energy Alliance was able to present at industrial and media events including AIST, G4SR, ITIF, and the Toronto International Film Fest where [Atomic Hope](#) was shown to critical acclaim.

As we near Thanksgiving here in the US, we also want to give thanks to the many people who have helped us along the way, some old friends and many new faces have provided support in countless ways. Without you, this endeavor would be fruitless.
