

Thorium Will Power The World

THORIUM is the future of Prosperity, & Abundance

October 2025 Thorium Developments

Texas Nuclear, DPA, Shut Down Affects License - Can we see the light at the end?

1.) TEA and The Thorium Products Corp participated in the Texas Nuclear Alliance

The 'Summit' was more of an ad for the state of Texas than a traditional technical conference - but hey, Texas totally deserves a victory lap.

While there were no questions allowed, you did get to see everyone from the Governor of Texas to Chairman Rick Perry talk about Fermi Nuclear's massive plan to build a lot of Gas plants . . . and some nuclear too.

We got to see Simon Irish of Terrestrial Energy Inc. speak several times and Doug Robison, the head of Natura Resources is now the head of the Texas Nuclear Alliance (!) - A molten Salt Guy! is now head of Texas Nuclear Alliance - WOW!

So - Texas is doing all the right things, for all the right reasons, economic, and financial and prosperity - and most importantly, they are putting up hundreds of millions

of dollars [\$350+ Million] and they are clearing the way from a regulatory point to speed the deployment of every type of nuclear energy.

From DOW Chemical trying to build 2 HTGRs for chemical processes - to Fermi trying to build 10 GW for A.I. Etc. - Texas is doing it.

And they have 4 major universities in the state building new reactors, as well as training up new employees and talent to run all of the new reactors being planned for the state.

Being from Illinois, I long for my state to get back into the game - or any other state (I'm looking at you Missouri!!!)

Now, let's just stop with the paper reactors and start to build these things now!

2.) Thorium Energy Alliance waits out the Shut Down for Next Steps for License

Well, One thing that for sure will not expedite license approvals is a Federal Government shut down . . . Frown Emoji . . . The Thorium Alliance and Products Corp. got as far as a preliminary audit of our license (the process is so baroque, don't even try to grasp what the stages are and why they are called preliminary when we have been at this for way over 3 years . . .)

TEA and TPC have assembled a complete and well-crafted license application for both a Demonstration facility and a Full production facility - both will sell Thorium and Uranium that is derived from the production of Rare Earths.

Disa has shown the way .

Disa is a company that aims to process Uranium tails and leftover ore stacks, and they have gotten their license in just 6 months (!) - it shows it can be done - and TEA / TPC will get it done.

We will get this license process done! and we will get these facilities built, because we have promised everyone reading this that we would make Thorium a fuel and critical material a real option for engineers to specify and use.

TEA keeps its promise to power the world with thorium - and build the future with Thorium.

3.) Thorium Products Corp Allowed Into DPA

After rejection and our explanation as to the importance of thorium to energy and industry - the new Thorium Products Corporation was allowed into the DoE DPA Nuclear Fuel Consortium Partnership.

That is still a great headline and now, TEA / TPC have participated in person in the DPA Consortium Kick Off Meeting this past week.

Because of the shutdown, it had to be held at NEI - that was really great of NEI

The DPA is a way for the nuclear fuels industry to work cooperatively together to solve supply chain issues without running afoul of collusion policies.

It was good to see that less common fuels were allowed at the table - Thorium, Spent Nuclear Fuel, Plutonium - all got to have their voices heard in addition to the very large Uranium contingent.

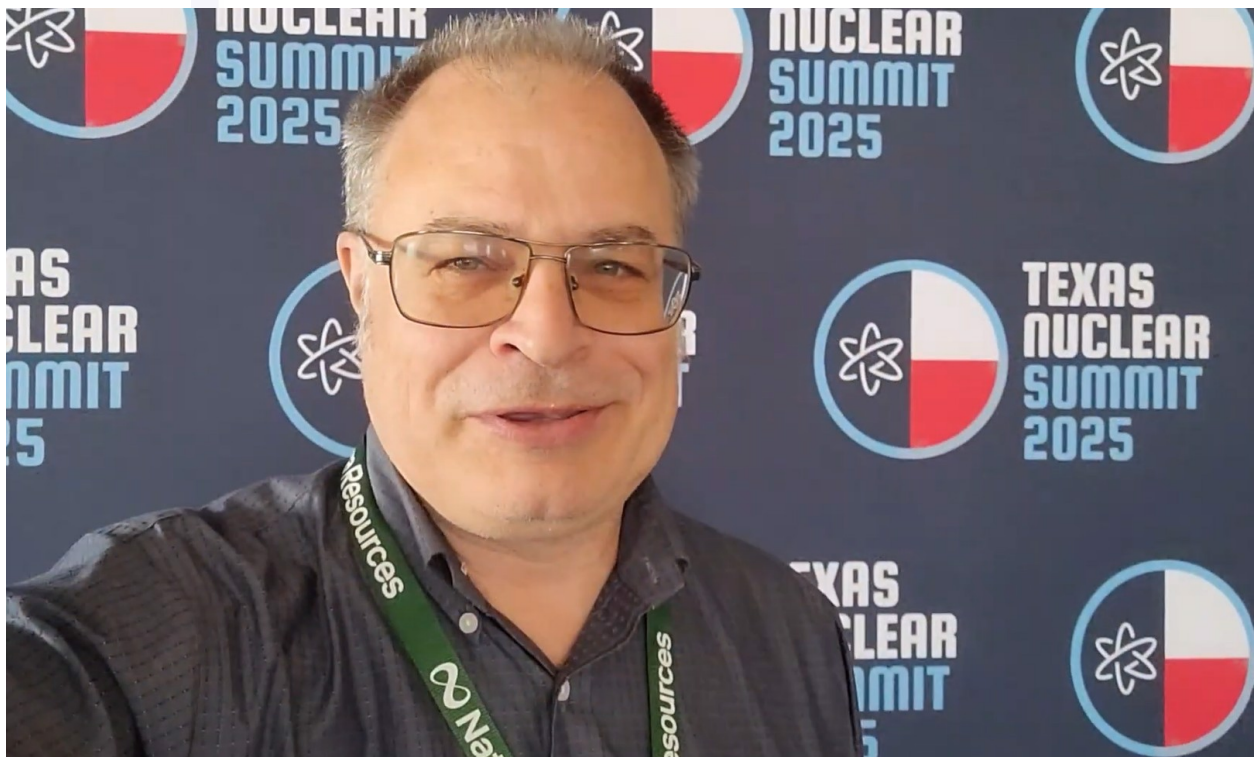

We got vast amounts of excited interest by many participants, very surprising support from legacy players, and it was good to be able to talk truths, dispel myths about thorium and even remind everyone that since we are getting our supply from Rare Earth

processing, that we will, in fact , also be producing a good amount of Uranium for industry.

It fills us with great hope and a bit of pride that so much forward progress is happening now, with Texas forging a path for other states and regions to follow, a line of site on a license and being taken seriously as critical fuel by the DoE makes us very eager to move things along - Build our thorium Bank, Supply the world, Create opportunity and abundance.

. We do this , and continue to do this , because you all support us - THANK YOU

Energy Department to Establish New Consortium for Nuclear Fuel Supply Chain

TEA got an Angel named Kirk to help us work through the ordeal down at ORNL We Still Need Folks to Keep At it ! The company tearing apart the MSRE building just wants to throw out everything ! Including stuff already on display ! - The Albuquerque Nuclear Museum, a Smithsonian Institution, has said they would take everything! This is a no brainer we have been fighting to correct for over 10 years. *We need just one more volunteer to help us save the MSRE artifacts, please help us at your service.* Replace this text with yours. (volunteers, Please bear with us , we are working to onboard everyone)

It's "Cartober" - Donate Anything that moves - It really Helps! TEA

[We want your car, plane, boat in 2025 - donate that vehicle! Thanks to all who donate](#)
