

April 2026 Thorium News

Start of 2nd Quarter | TEA & NRC | All The Thorium Business | Energy Celebration
Earth Day Brings Hope to Thorium

1.) We are Starting the 2nd quarter of 2026 with a New NRC Meeting! - TEA starts the new history of Thorium Products PBC Inc. with good news - NRC is back in play. Celebrate with us as we just got notice of a new consultation for us to explain the need for Thorium at the NRC. This comes as we have reorganized our efforts under a new corporate structure called **Thorium Products PBC Inc. TP PBC** is organized as a supply chain reliability first company (as opposed to share holder value first above all) - this gives TP PBC the ability to act as a sort of utility to guarantee to our off-takers that the supply they rely on, will always be there. We will never sell out to foreign interests, and will always prioritize real end users of Thorium and creators who want to use thorium to make what they need to create a future where property can happen.

2.) **Thorium Based Corporations Are Working to Make the Future Happen Fissionaire** - a real thorium Hero of ours, David Holcomb, is now on top of making a modern version of the Thorium Molten Salt Breeder Reactor real. We got to meet with Scott Ferrara of Fissionaire in Madison Wisconsin recently and we came away super excited that this newest reactor company can rocket ahead and get things done - if there is one very smart thing they are doing, it is putting Thorium at the core of their fuel cycle, we might be biased, but we think that is a smart idea. We can't wait to see what developments come from their work to deploy this system.

Clean Core Thorium Energy - Continues to plow the road going uphill in the wind. We love the dynamics of CCTE. They are knocking down barriers and delivering real results, real product, real plans. We at TEA are sick of paper reactors and power point plans. Here is the news - " Today, we are excited to expand our partnership with Canadian Nuclear Laboratories (CNL) by signing an agreement to fabricate ANEEL fuel bundles for a commercial reactor demonstration - a key milestone on the path to commercial deployment." You can read the full story on [CNL's website here](#) and see more context on their [LinkedIn here](#).

Disa - While focused on processing tailings and recovering Uranium, They have been pioneers in licensing and have bushwacked the way for thorium products Corp. to follow. We are lucky to have trail blazers who are clearing the over grown brush between us and success. The path to success has over grown with weeds and obstacles in the last 50 years. Progress in nuclear technologies of any sort have wandered in the wilderness. We have spoken often about the advances in nuclear technologies that have been lost because we dropped the ball. Disa is at the front of the pack trying to bring back technological advances that we will benefit from for decades. TEA is grateful for the great example they have been for companies trying to introduce new nuclear technologies.

- Put Your Money Where Your Mouth is - :
Nucleation Capital - Copenhagen Atomics
Straight from the mouths of the most innovative nuclear fiance and investment company, we get a reminder that Nucleation capital is trying to bridge the financial valley of death that many start-ups face , with private capital and not just government handouts. Valerie Gardner and Rod Adams know what is what when it comes to financing the next generation of nuclear technologies - no money - no company
No Cash - no nukes. Money talks, B.S. walks - we need Nucleation to keep raising money for the most advanced reactor systems and fuels cycles on planet earth. They run the most unique and affordable way to participate in the new materials and energy future - Give them a look if you have a little money to risk on a future that has better energy and materials than any of us have today. Look at the proposal they have with Copenhagen Atomics, it is a good example of how this works when we work together to finance the revolution.
They Say " If you want to promote access to this SPV to your community, I'd love that so we can help Copenhagen raise even more capital. If so, please use my standard link here " - Valerie.

Copenhagen Atomics has a brand new Podcast , it is right here - a great CA breakdown:
<https://youtu.be/HXCxYKxuGU?si=o5G-wA3p7vSaOnH7>

None of these companies or investments are guaranteed to work, if you don't have the money, don't even start to think about investing in this sector - it is a long a fraught path that will break your heart.

5.) **DoE DPA for Nuclear Fuel** - We will talk more soon about our role in the new Department of Energy Nuclear Fuel Consortium DPA. We, along with Arbor Halides and others, have made sure Thorium is part of the nuclear fuel discussion. We are even making sure that thorium is acknowledged as a critical material that can be used in Alloys, catalysts, optics, ceramics and medicine, there is no other nuclear fuel that can play the role of a platinum group metal, a refractory metal, and a rare earth metal as well as an actinide for clean safe fuel - it is truly the most unique element in the periodic table. The DPA is a great move of the DoE and Chairman Wright, TEA is glad to be a part of it.

4.) **Energy Wealth Project (EWP) Celebrates Thorium Energy Successes in 2026 !**
Energy Wealth Project, is having a combined fund raiser and celebration on **August 7th 2026 at the Raus Performing Arts Center in Crystal Lake IL USA. Doors open at 6PM, Bands Start Right at 7PM** E.W.P. promotes technologies to students to learn about advanced energy systems and critical materials as sure way towards opportunity, prosperity and a Bright Future with some understanding that it will be a long time before A.I. takes these most important jobs - Spread the word.
The Great artists playing the showcase are **Robbie Fulks & Griffin William Sherry**, drinks, food! and you'll get to hang with the best thorium folks!
Your tickets will be cheap! \$36 so please, drop the organizers a line and they will put you on the reservation list:
skutsch@gmail.com

Below , some good news about Thorium and all the reasons we listed above.

We have asked - and asked again! UCORE at ORNL - save the MSRE Artifacts!
We Need Folks to Keep At UCORE ! ; The company tearing apart the MSRE building just wants to throw out everything ! Including stuff already on display ! - The Albuquerque Nuclear Museum, a Smithsonian Institution, has said they would take everything! This is a no brainer, we have been fighting to correct this for over 10 years.
We are asking for one more volunteer to help us save the MSRE artifacts, please help us.

You Can Donate Anything that moves - It really Helps! TEA
We Got another SUV DONATED !!!

We want your car, plane, boat today - donate that vehicle! Thanks to all donors
CLICK THIS TO DONATE YOUR CAR, BOAT, PLANE

Be The First Buy a T-shirt and stickers
and Mention "BOOK" in the Order
and we will give you a copy "RAD FUTURE"

while supplies last
Support the TEA today!

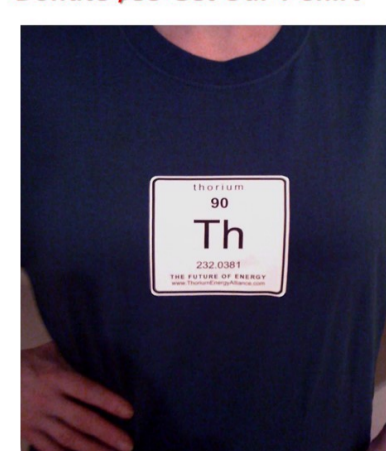

COOL PEOPLE BECOME A MEMBERS !

Please consider becoming an annual member of the Thorium Energy Alliance; you can choose your annual (or monthly) contribution. Our members keep this organization moving towards a future of clean, safe and reliable energy.

[Donate](#) or Become a [Supporting Member today!](#)
We also have shirts, stickers, and videos for sale.

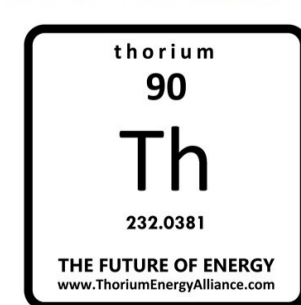

If you have a used car - you can painlessly donate that right on our site [HERE](#).

Donate \$7 Get Our Sticker Pack
Donate \$35 Get Our T-Shirt

Great Work!**

To Everyone who has made all of our successes a reality.
You Keep Us Committed to this work - 2026 has been a swell thorium year so far !
